- 1 Parameters of the EPU36
- 2 Modes of operation
- 3 Dynamic multipoles in the horizontal polarization mode
- 4 Dynamic multipoles in the circular polarization mode
- 5 Dynamic multipoles in the $+45^\circ$ inclined mode
- 6 Dynamic multipoles in the -45° inclined mode
- 7 Dynamic multipoles in the vertical polarization mode
- 8 Horizontal kick from the EPU36
- 9 Vertical kick from the EPU36

Parameters of EPU36

Main parameters

Period Length	36	mm
Gap	7.5	mm
Length	3976	mm
Number of full poles	219	
Beam Energy	2.0	GeV

Geometry

Width of magnets	25	mm
Height of magnets	25	mm
Thickness of magnets	8.85	mm
Coating thickness	0.010	mm
Gap between rows	1	mm

Magnet Material

Type	Horizontal	Vertical
Make	VACODYM 776 TP	VACODYM 764 TP
Remanence typical	1.32 T	1.37 T
Remanence minimum	1.28 T	1.33 T
χ_{\parallel} Susceptibility	0.06	0.06
χ_{\perp} Susceptibility	0.17	0.17
H_{cJ} Intrinsic Coercivity	21 kOe	16 kOe

Model of the undulator

Radia [O. Chubar, P. Elleaume and J. Chavanne, "A 3D Magnetostatics Computer Code for Insertion devices". Journal of Synchrotron Radiation, 5:481-484, 1998.] has been used for the calculations. The model of the undulator, using the minimum remanence, is 303.6 mm long and contains 15 full size poles and the end sections.

The dynamic multipoles are calculated by the method described in [P. Elleaume, "A New Approach to the Electron Beam Dynamics in Undulators and Wigglers", Proc. of European Particle Accelerator Conference 1992, EPAC 1992, Berlin, Germany, pp 661-663.].

Modes of operation of the EPU36 (Period = 36 mm, Gap = 7.5 mm)

Helical mode

Circular polarization in the helical mode:
Symmetric phase = 10.151 mm

Inclined mode

45° polarization in the inclined mode:
Asymmetric phase = 9.577 mm

Planar mode, horizontal polarization: phase = 0 mm

Vertical mode, vertical polarization: phase = 18 mm

Effective fields, K -values, fundamental photon energies, and radiated power

Mode	Phase [mm]	Effective vertical field [T]	Effective horizontal field [T]	K -value	Photon energy [eV]	Radiated power [kW]
Planar	0	1.032	0	3.47	150.3	5.34
Circular	10.151	0.651	0.651	3.10	182.1	4.25
Vertical	18	0	0.843	2.83	210.6	3.56
45° Incl	9.577	0.463	0.463	2.20	308.3	2.15

The upper limit for the photon energy range for the fundamental harmonic is 977.4 eV assuming a minimum K -value of 0.4.

The beam energy is 2.0 GeV and the beam current is 0.5 A.

Focusing potential in the HP mode

Kick map for the HP mode used for tracking [T^2m^2]

Kick map in the HP mode [μrad]

Integrated quadrupole strength map in the HP mode [T]

Focusing potential in the CP mode

Kick map for the CP mode used for tracking [$T^2 m^2$]

Kick map in the CP mode [μrad]

Integrated quadrupole strength map in the CP mode [T]

Focusing potential in the IP mode

Kick map for the IP mode used for tracking [T^2m^2]

Dynamic multipoles in the $+45^\circ$ inclined mode (IP)

Kick map in the IP mode [μrad]

Integrated quadrupole strength map in the IP mode [T]

Focusing potential in the IPN mode

Kick map for the IPN mode used for tracking [T^2m^2]

Dynamic multipoles in the -45° inclined mode (IPN)

Kick map in the IPN mode [μrad]

Integrated quadrupole strength map in the IPN mode [T]

Focusing potential in the VP mode

Kick map for the VP mode used for tracking [T^2m^2]

Dynamic multipoles in the vertical polarization mode (VP)

Kick map in the VP mode [μrad]

Integrated quadrupole strength map in the VP mode [T]

Horizontal kick from the EPU36

Vertical kick from the EPU36
